

FLUX 2.0

BY DRIVEV

**Connected-EV Telematics, Battery-Life, CO₂ &
Rewards Platform**

Product Proposal — for Internal Approval

EV-only · BEV · PHEV · HEV | 2026-06-15 | Confidential — Internal

The opportunity

EV adoption is accelerating across BEV, PHEV and HEV, but most owner apps stop at charging maps. Engagement decays after onboarding, and operators lose the daily relationship that drives loyalty, retention and lifetime value.

FLUX 2.0 is DrivEv's connected-EV engagement platform. It converts everyday driving into **measurable benefit and a daily habit** by uniting four loops the market treats separately: live **telematics & eco-coaching**, **battery-life protection**, **CO₂ & cost savings**, and a **loyalty & rewards** economy with real partner perks.

This proposal requests approval to take the working FLUX 2.0 prototype (already built and demoable end-to-end) to a production pilot. The prototype demonstrates the full experience on desktop and mobile, EV-only across BEV/PHEV/HEV, with a refined DrivEv brand system and no placeholder emoji.

What we are asking for

Approval and funding for a Phase-1 production pilot (≈2 quarters): real telematics ingestion, accounts, a managed datastore, and one partner reward integration, with a 500–1,000 driver pilot cohort.

Why now

The prototype de-risks product and UX. The remaining work is integration and hardening, not discovery — a fast path to a measurable retention lift.

The problem

Engagement falls off a cliff

Owner apps are opened to find a charger, then forgotten. There is no daily reason to return, so the operator relationship — and upsell — fades.

Value is invisible

Drivers can't see what going electric actually saves them (money, CO₂) or how their habits affect battery life and resale value.

Loyalty is generic

Points programs rarely tie to real behaviour or real-world perks, so they don't change habits or build stickiness.

Hybrids are ignored

PHEV/HEV owners get tools built for BEVs (or ICE), with no fair, powertrain-aware view of their impact.

The FLUX 2.0 solution — four reinforcing loops

Telematics & eco-coaching

Every trip graded A+→E on efficiency and smoothness, with one high-impact coaching tip. The Simulator Lab lets drivers see, in real time, how speed, aggression and regen change energy, cost and credits.

Battery-life protection

State of Health, warranty tracking, life projection and personalised charging advice — protecting range and resale value. Powertrain-aware for BEV, PHEV and HEV.

CO₂ & cost savings

Each electrified kilometre translated into CO₂ avoided, litres of fuel and money saved vs a comparable petrol car — the tangible daily payoff.

Loyalty & rewards

Eco-Credits, tiers, streaks, challenges and badges, redeemable for real partner perks: charging, car wash, coffee, service credit, insurance discount.

FLUX 2.0 is deliberately **EV-only**. Pure internal-combustion vehicles are out of scope and never onboarded. The platform models the three electrified powertrains as first-class citizens, with a fair, powertrain-aware impact engine.

Powertrain	Electric share (modelled)	Charging	Tailored treatment
BEV — Battery Electric	100% electric	Plug-in (AC/DC)	Full battery diagnostics, charge-habit coaching, max savings.
PHEV — Plug-in Hybrid	~62% electric	Plug-in (AC/DC)	Blended electric + petrol impact; EV-range and charge coaching.
HEV — Hybrid	~30% electric	Self-charging (no plug)	Self-charging messaging; efficiency + regen focus; no plug-in nudges.

In scope (pilot)

Driver app (web + mobile-responsive), telematics ingestion, eco-scoring, battery model, CO₂/cost engine, Eco-Credits & tiers, challenges, leaderboard, one partner reward integration, accounts.

Out of scope (pilot)

Native iOS/Android wrappers (PWA first), full partner marketplace, payments/billing, fleet/B2B console, insurance underwriting. Designed-for, scheduled for later phases.

A refined, realistic DrivEv-aligned system. **Line icons only — no emoji** — a single typeface, soft surfaces and a confident, encouraging voice. Full tokens in `BRAND.md`.

Product Proposal — Internal Approval

Confidential

Mobile wireframe

Onboarding · Dashboard · Simulator Lab — fixed bottom tab bar, stacked cards, touch-first.

FLUX 2.0 is built as a clean, swappable service so the pilot can ship fast and scale without rework. The prototype already separates the domain engine (scoring, battery, CO₂, rewards) from storage and presentation.

Ingestion (provider-agnostic)

A normalised trip/telemetry contract behind a thin adapter — connect Smartcar / OEM APIs / OBD with no change to the domain engine. Webhook + poll supported.

Domain engine

Pure, unit-testable modules for eco-scoring, battery SoH, CO₂/cost and the loyalty economy. Powertrain-aware. Tunable via a single config.

Data & API

Stateless REST API; pilot moves from file store to a managed Postgres with per-driver isolation. Horizontally scalable behind a load balancer.

Clients

Responsive web/PWA today (desktop + mobile); native wrappers later. Vended assets, no runtime CDN dependency.

Scalability path

Stateless services + managed datastore + cached aggregates → scale to fleet-wide volumes; batch trip ingestion and pre-computed leaderboards keep reads cheap.

Phase	Window	Outcome
0 · Prototype DONE	Complete	End-to-end demo: all four loops, EV powertrains, brand system, desktop + mobile.
1 · Production Pilot	Q3-Q4 2026	Real telematics ingestion, accounts, Postgres, 1 partner reward, 500–1,000 driver cohort.
2 · Scale & Marketplace	Q1-Q2 2027	Native apps, partner marketplace, more rewards, A/B engagement engine, regional CO ₂ factors.
3 · Platform	H2 2027	Fleet/B2B console, insurance & lease integrations, open partner API.

Phase-1 team (indicative)

2 full-stack engineers, 1 mobile/front-end, 0.5 designer, 0.5 data, 0.25 PM — plus partner/legal support for the reward integration. ~2 quarters.

KPIs (pilot targets)

D30 retention +15-25 pts vs a charging-only baseline app.	Weekly active / MAU ≥ 55% — driven by streaks, challenges and the Lab.	Eco-score lift Measurable improvement in cohort average over 8 weeks.
Reward redemptions ≥ 30% of active drivers redeem ≥ 1 perk in the pilot.	CO₂ & cost shown Cumulative verified savings surfaced per driver.	NPS ≥ 45 within the pilot cohort.

Key risks & mitigations

Risk	Mitigation
Telematics coverage / API limits across OEMs	Provider-agnostic adapter; start with widely-supported APIs; OBD fallback.
Data privacy & consent (location)	Explicit consent, data minimisation, regional compliance reviewed in Phase 1.
Reward economics / partner supply	Tunable points economy; start with one anchor partner; cap liabilities.
Model accuracy (battery/CO ₂)	Transparent heuristics now; calibrate against real telemetry and regional grid factors.

Decision requested

Approve FLUX 2.0 to proceed to a Phase-1 production pilot, with the indicative team and ~2-quarter timeline, and authorise one anchor partner reward integration.

Immediately on approval

1. Confirm telematics provider(s) and sign data agreements.
2. Stand up accounts + managed Postgres; wire the ingestion adapter.
3. Integrate the first partner reward (charging credit) end-to-end.
4. Recruit the 500–1,000 driver pilot cohort across BEV/PHEV/HEV.
5. Instrument KPIs and run an 8–12 week measured pilot.

Already de-risked

Product, UX, brand and the full engagement loop are built and demoable today — reducing Phase-1 to integration and hardening.

Appendices available

Live prototype, brand guide (BRAND.md), wireframe pack and screenshot deck accompany this proposal.
