

drivEV

BY YINSON GREENTECH

Connected-EV Driver & Fleet Engagement Platform

Telematics · Battery Life · CO₂ & Rewards · EV-only (BEV/PHEV/HEV)

Product Proposal — Internal Approval · 2026-06-15

THE PROBLEM

Engagement decays — and value goes invisible

01

Apps get forgotten

Opened to find a plug, then closed. The lease/fleet relationship fades.

02

Savings are invisible

Drivers can't see what electric saves them, or how habits hit battery life.

03

Loyalty is generic

Points don't tie to real behaviour or pull demand into chargEV.

04

Hybrids mistreated

PHEV/HEV drivers get BEV- or ICE-shaped tools — no fair view.

THE OPPORTUNITY

One engagement layer across the ecosystem

The app compounds value for every business it touches — higher **lease renewal & LTV**, better **fleet utilisation**, more **chargEV sessions**, and a credible **ESG** asset.

THE SOLUTION

Four reinforcing loops → a daily habit

1

Telematics & eco-coaching

Every trip graded A+→E with one high-impact tip. The Simulator Lab makes efficient driving a game.

2

Battery-life protection

State of Health, warranty & tailored charging advice — protecting range and residual value.

3

CO₂ & cost savings

Each electrified km as CO₂, fuel and money saved vs petrol — the tangible daily payoff.

4

Eco-Credits rewards

Tiers, streaks & challenges redeemable for real perks — anchored by chargEV.

Dashboard — live, personalised per driver & powertrain

Real-time impact — the daily engagement hook

Mobile-first — onboarding, dashboard, lab

SCOPE · EV-ONLY

Built for BEV, PHEV & HEV — fairly

BEV

Battery Electric

100% electric · plug-in (chargEV). Full battery diagnostics & max savings.

PHEV

Plug-in Hybrid

~62% electric · plug-in. Blended impact; EV-range & charge coaching.

HEV

Hybrid

~30% electric · self-charging. Efficiency & regen focus.

Pure-ICE vehicles are out of scope and never onboarded.

BUSINESS IMPACT

KPIs tied to the P&L

**+15-
25 pts**

D30 retention vs charging-
only baseline

Lease renewal & LTV

Fleet utilisation & uptime

chargEV sessions / active
driver

Plus measurable eco-score lift and battery-care (residual value) improvement across the cohort.

ROADMAP

Prototype done — pilot next

Phase 0

Prototype

DONE

End-to-end demo, all loops, EV powertrains, mobile.

Phase 1

Production Pilot

Q3-Q4 2026

Telematics, accounts, Postgres, chargEV reward, 500-1k drivers + 2-3 fleets.

Phase 2

Scale

H1 2027

Native apps, marketplace, fleet console, A/B engine.

Phase 3

Platform

H2 2027

Fleet/B2B, insurance & lease integrations, open API.

THE ASK

Approve the Phase-1 production pilot

Fund ~2 quarters

2 full-stack · 1 mobile · 0.5 design · 0.5 data · 0.25 PM, plus chargEV/legal support.

Authorise chargEV reward

One anchor integration — points → real charging demand.

Pilot cohort

500–1,000 drivers + 2–3 fleets across BEV/PHEV/HEV; 8–12 week measured pilot.

Product, UX and the full engagement loop are already built and demoable — Phase 1 is integration & hardening, not discovery.

drivEV

**Turning every electrified kilometre into retention, utilisation
& loyalty.**
